The Effects of Climate

What affect do climate conditions have on the way people live? Can you find an example of a place where the climate limits the way people live? Can you find a place where the climate helps people and communities thrive and become successful?

1. Begin by making a chart of climates and their effects, based on places Geo and Meri visited.
2. From this chart, select locations that show positive effects of climate and negative effects of climate.
3. Then write a paragraph or blog entry about the positive and negative effects of climate on people and communities. (Check with your teacher for other ways of presenting what you have found).

If you have a different set of steps to follow to answer the questions about climate impact, share your problem-solving strategy with your teacher for approval.
